

SECURITY

ARION SECURITY (K) LTD

Securing You Beyond Borders

ARION Security Ltd is a security service provider company with registered offices in Luton, United Kingdom and Nairobi, Kenya. The company is providing tailor made security services aimed at clients with different types of security needs. The company uses the latest NFC solutions which combine NFC-enabled mobile phones with RFID tags. The tags are distributed and placed at the locations where the guard needs to go and perform the rounds or other required tasks that might be required. The locations can be residential areas, industrial locations or offices as well as public areas and buildings. A typical round takes one hour for residential locations and 30 minutes for offices. However, the rounds are customized to suit the security needs of every client. To be able to see what happens in the field at all time and to offer a better safety for its guards, Arion Security has chosen Reslink Solutions as a trusted solution provider for its guarding needs.

“As a Security Company you are looking for an efficient, reliable and cost-effective solution that can offer you the tools to protect your clients and your guards at the same time.”

Samuel N Muigai, MD at Arion Security.

Data Retrieval

An NFC enabled mobile phone, makes it easy for Arion Security guards to retrieve information relevant to where they are and what is happening at the location. This is simply done by touching a location tag with their phone. Sometimes, a location requires that the guard performs additional actions such as extra checks or simply reports the status at that particular location. These extra actions can be revealed when the guard touches the tag.

Data Collection

Recording data is equally simple for the guard. All is done with their NFC enabled phone. Start/end shift times, incidents and other details are all automatically assigned to the right guard and right site when the data is collected. The data can be a simple text input, or a selection from a pre-determined list. Additionally the guard can take a picture or record a sound or a video. A timestamp is placed automatically on the picture or video for later reference. No matter what type of data, it is immediately visible to Arion Security managers via Reslink's real-time Control Room display.

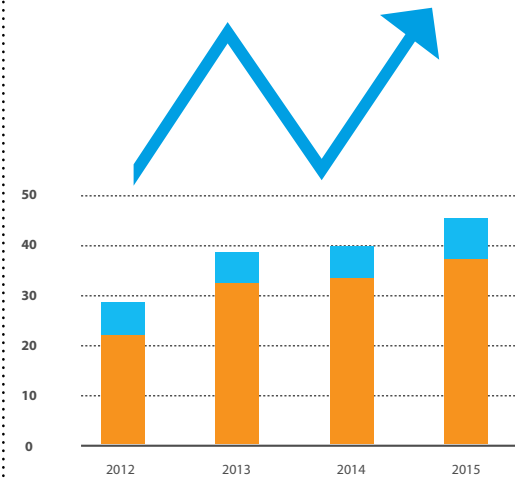

Attendance Alerts

Arion Security is particularly satisfied with the Reslink Attendance Alerts module. This particular function monitors site checkpoints and immediately sends alerts by SMS and/or email if a guard misses a check within the specified timeframe. The attendance alerts are a safety measure for the guards as well as for the client. There can be a various numbers of reasons why a guard has missed his round or a particular checkpoint. The mobile phone is also an ideal tool to use for Lone Worker Protection (LWP) and with Reslink Arion Security makes it easy for employees to instantly transmit that they are in danger.

"The system enables me to respond to any security matter in real time. Additionally, I am able to constantly monitor the safety of my guards and react if something occurs. The "Lone Worker Protection" feature adds a layer of extra security when it comes to the safety of our guards."

Samuel N Muigai, MD at Arion Security.

Management Reports

All data recorded by the guards is immediately available in the Reslink web-based back-office system. Arion Security management has 24 hour access from anywhere in the world to these reports.

Reslink's reporting tool provides a full audit trail of historical transactions and a list of daily/weekly/ working hours for every guard. All exceptions (attendance failures) are logged separately and additional notes can be added as to the reason for the failure. The reports can be exported and saved as CSV or PDF format. The automated email feature may be configured so that Arion Security's management receives every morning an email with the previous day reports.

Benefits of Reslink Solutions

- Guaranteed proof-of-attendance, for Arion Security management and the end-client
- Real-time guard management
- Ensure the safety of your employees.
- React to unexpected situations in real time
- Information in the guards hand at the place they need it
- Almost zero paperwork
- Improve the efficiency of your operations
- Guards carry only one device, their mobile phone.
